

## Review of the International Thematic Proceedia titled „Psychology in the world of science”

A special publication by the Department of Psychology of the Faculty of Philosophy of Niš, Serbia, named International Thematic Proceedings “Psychology in the world of science” represents a scientific publication devoted to the complex role of the Psychology in the world of science. This is a very important collection of research papers, which were presented at an International 16th International Conference “Days of Applied Psychology” held on September 25th & 26th 2020 at the Faculty of Philosophy, University of Niš.

This scientific publication contains 18 peer-reviewed articles which can be classified as original scientific papers and as review papers. The authors/presenters of these manuscripts come from six countries: Portugal, Bosnia and Herzegovina, Slovenia, Bulgaria, Turkey, and Republic of Serbia.

The Proceedings begin with eight papers presented within following Symposiums: Beyond Behavior: Using Technology to inform Applied Psychology; Schema Therapy – its role and application in the world today; Intercultural Sensitivity and Education; Sexual Behavior and Stressful Experiences in students: the role of Personality Dimensions and Attachment; Health perception and psychological correlates of health behavior in young people; Applied Psychology of Morality. Other papers belong to the different areas of psychology, reflecting the scope of interest of the authors as well as the topic of the conference. They are organized into the following thematic sections: Organizational Psychology; Educational Psychology and Cyberpsychology; Clinical Psychology and Psychotherapy; and Individual Differences.

Judging by the diversity of perspectives and academic interest presented in this research collection, this International conference brought together researchers and practitioners from various fields of psychological research to create a rich and interdisciplinary multifaceted way of view at Psychology in the world of science.

Reading this book, I was fascinated by the authors' great contribution to the important topics focused on the role of psychology in the world of science, in our life, thus underlining the potential contribution of psychology in supporting the comprehension and possibly the improvement of the quality of persons' life and well-being. These are just examples of the richness contained in this book of proceedings, whose dissemination among researchers and professionals I strongly recommend.
