

BACHELOR IN SOCIOLOGY

Grados / Bachelor's Degrees / Bachelor in Sociology

PRESENTATION

The UC3M Bachelor's Degree in Sociology aims to train professionals with the capacity to analyse and understand the numerous social phenomena that characterise different societies. To this end, the degree provides theoretical and practical knowledge that enables professional insertion in various areas of research and social action, both autonomously and as a complement to other disciplines.

The degree has an applied profile connected to professional development, without abandoning theoretical and conceptual training. The programme is developed along three lines: sociological theory (understood in a broad sense, including sociological theories, understanding of social structure and related issues), training in methodology (represented in qualitative and quantitative techniques and statistics) and more professional training (explicitly oriented towards consultancy or human resources management, among other areas).

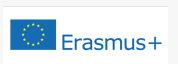

The studies are offered face-to-face, to guarantee the acquisition of knowledge in a collective way and guided by critical reasoning, and mostly in Spanish, although subjects will be offered in English as a way of reinforcing the professional mastery of this tool. In addition, the teaching of the Degree is completed with curricular internships in companies, institutions and organisations.

Employability and profesional internships

UC3M has agreements with more than 5,000 companies and institutions for internships and access to employment opportunities

95.5% of graduates have access to a job related to their studies in the first year of graduation, according to the [Study of Professional Insertion](#) of Graduates of the Universidad Carlos III de Madrid.

MORE INFO

Non european mobility

UC3M first degree and post graduate students to spend one or more terms in foreign universities with which UC3M has special agreements or take work placement or internship at an EU company. These are called Erasmus Grants which are provided by the EU and the Spanish Ministry of Education.

UC3M enables UC3M degree students to study one or several terms in foreign universities with which the university has special agreements. It also has agreements with the UC3M.

Erasmus awards are awarded to students with the best academic results and the language threshold (English, French, German etc..) for the destination.

PROFILE AND CAREER OPPORTUNITIES

Entry profile

Graduate profile

Graduate profile

The Bachelor's Degree in Sociology aims to train students in the tools of sociological analysis that are essential for the proper exercise of the profession. The graduation profile therefore combines applied knowledge and theoretical knowledge in order to train professionals who are capable of comprehensively analysing reality. Among the competences obtained, the following can be highlighted:

- Apply knowledge to the resolution of problems in complex and specialised social and work environments, for an adequate understanding of social phenomena.
- Provide creative and innovative responses by means of arguments or procedures developed and supported by the knowledge acquired and the ability to adapt.
- Collect and interpret data and information on which to base analyses from a critical and reflective perspective.
- Possessing the ability to manage complex situations or those requiring the development of new solutions, both in the academic and work environment.
- Know how to communicate knowledge, methodologies, ideas, problems and solutions related to the field of sociology to all types of audiences in a clear and precise manner.

- Be able to establish relationships between the structural and individual spheres, in order to develop complex, in-depth and systematic analyses of the functioning and structure of social reality.
- Acquire mastery of the techniques of social research analysis, both quantitative and qualitative, as a basis for the elaboration and interpretation of social processes.
- To develop the capacity for observation, teamwork and a multidisciplinary approach that allows for analyses and interpretations that go beyond the most obvious.

Learning outcomes of the Bachelor's Degree in Sociology
